

This ball caster kit has a 3/4in diameter metal ball. The kit includes a black ABS housing, a 3/4in diameter metal ball, two 1/16in spacers, and two #2 screw sets. The total height of the ball caster (0.83in) can be increased by using the included spacers to approx. 1in.

This ball caster is just one of the many **Pololu** accessories carried by **Rapid**.

For further resources please see [here](#).

- Two included #2 screws used to mount ball caster to chassis
- Distance between screw holes 0.61in

Note: This ball caster is designed for small robots and is not intended to bear more than a few pounds. With more weight than this, friction between the ball and the housing will probably keep it from rolling well.
